

Summary

Solution Architect with **18 years of experience** designing and delivering **enterprise-scale applications** across cloud and hybrid environments. Expertise in **API-first architectures, microservices, event-driven systems, and cloud-native application design** supporting web, mobile, and distributed backend services. Strong background in defining **secure, scalable, and resilient architectures** with clearly defined **NFRs**, identity and authorization patterns (OIDC, RBAC), and consistent API design. Experienced in **Kubernetes-based deployments, CI/CD automation, and GitOps-driven delivery**. Proven ability to drive **architecture governance, design reviews, and cross-team technical alignment**. Deep experience with **Microsoft Azure** including **App Services, API Management, Azure Functions, Azure SQL, Key Vault, and Azure Monitor**, delivering **high-availability and fault-tolerant enterprise platforms**.

Skills

Architecture & Design:	Distributed Systems, Microservices, Monoliths, Event-Driven Architecture, API-First Design, DDD, SOLID Principles, ADR
Application Development:	.NET Core, ASP.NET Core, C#, Web APIs, EF Core, RESTful Services, High-Performance API Design, Async Messaging
API & Integration:	OpenAPI/Swagger, API Versioning, Idempotent Patterns, Service-to-Service Communication, Integration Patterns
Cloud & Platforms:	Microsoft Azure, AWS, Cloud-Native Application Design
Containers & Orchestration:	Docker, Kubernetes, Containerized Workloads, Helm, Scalable Platform Deployments
DevOps & Delivery:	Azure DevOps, GitHub Actions, CI/CD Pipelines, GitOps, IAC (Terraform, Bicep), Blue/Green Deployments, Canary Releases
Security & Identity:	Azure AD / Entra ID, OAuth2, OIDC, RBAC, Managed Identities, Secure Coding (OWASP), Secrets Management
Observability & Operations:	Application Monitoring, Logging, Metrics, Azure Monitor, Performance & Resiliency Engineering
Data Platforms:	MS SQL Server, Azure SQL, PostgreSQL, MySQL, Data Modeling, Schema Design, Database Performance Tuning
Web Technologies:	HTML5, CSS3, JavaScript, Angular, React, Responsive Web Applications

Education

Master of Computer Applications (MCA)

Maharaja Agrasen Himalayan Garhwal University

Bachelor of Computer Applications (BCA)

Makhanlal Chaturvedi National University of Journalism and Communication

Certifications

- AI-102** Microsoft Certified: Azure AI Engineer Associate
- TOGAF** Enterprise Architecture Practitioner
- CISM** Certified Information Security Manager
- AZ-400** Microsoft Certified: DevOps Engineer Expert
- AZ-305** Microsoft Certified: Azure Solutions Architect Expert
- DeepLearning.AI** TensorFlow Developer
- AZ-104** Microsoft Certified: Azure Administrator Associate
- AZ-900** Microsoft Azure Fundamentals

Experience

EY GDS - Payroll - Prodcon

Apr 2026 - Present

MS Architect

- Handling multi cloud environment - Azure, Nutanix, VMware, AWS

Tollring Software Pvt Ltd

May 2022 - Apr 2026

Security and Solution Architect

- Define target-state architecture for cloud-native enterprise platforms on Azure, designing microservices-based application services supporting web, mobile, and backend integrations for global customers including British Telecom.
- Establish architecture standards for API-first and event-driven systems including service boundaries, API versioning, idempotency patterns, and backward compatibility practices.
- Define application non-functional requirements (availability, scalability, resiliency, observability and performance) and translate them into architectural patterns and deployment standards.
- Design identity and authorization architecture using Azure AD / Entra ID, OAuth2, OpenID Connect and RBAC including secure service-to-service authentication and token-based access models.
- Drive secure-by-design application architecture aligned with OWASP guidelines including threat modelling (STRIDE), secure secrets handling with Key Vault, encryption patterns and input validation.
- Implement enterprise DevSecOps architecture including CI/CD pipelines, automated security scanning (SAST), policy-as-code and secure artifact management.
- Define deployment strategies for distributed systems including blue/green deployments, staged rollouts and automated infrastructure provisioning using Terraform.
- Establish observability standards including centralized logging, metrics, distributed tracing and operational runbooks to support SLO-driven operations.
- Lead architecture governance through design reviews, technical standards and architecture decision records (ADR) ensuring consistent implementation across engineering teams.
- Mentor engineering teams on microservices architecture, secure coding practices, and cloud-native development patterns.

Veebrij Software Pvt Ltd

Jan 2018 - Apr 2022

Security and Solution Architect

- Defined target-state architecture for enterprise applications migrating from traditional datacenter environments to cloud-native platforms.
- Designed scalable application and integration architectures using service-based patterns, REST APIs and asynchronous messaging workflows.

- Implemented identity federation and access management architecture using Azure AD, enabling secure authentication, SSO and conditional access.
- Designed network and security architecture supporting microservices platforms including API gateways, segmentation and zero-trust principles.
- Established observability practices including centralized logging, monitoring and alerting to improve operational readiness and incident response.
- Led migration strategy for critical applications to Azure IaaS/PaaS including architecture blueprints, migration waves and rollback procedures.
- Automated infrastructure provisioning and application deployment using Infrastructure-as-Code (Terraform) and configuration automation.
- Conducted threat modelling and architecture risk reviews to ensure secure-by-design implementation across enterprise services.
- Maintained architecture documentation, reference designs and ADRs to guide engineering teams and vendors.
- Led technical workshops with engineering and business teams to translate business workflows into scalable platform services.

Veebrij Software Pvt Ltd

Apr 2016 - Dec 2017

Tech Lead

- Designed automation platform for TLS certificate lifecycle management using Let's Encrypt APIs across hundreds of Azure-hosted services.
- Led migration of large-scale enterprise workloads and data (300TB+) to Azure cloud storage platforms while maintaining availability and performance.
- Implemented identity and access management using Azure AD for secure access across infrastructure and application services.
- Designed scalable infrastructure supporting high availability workloads across on-prem VMware and Azure environments.
- Led root cause analysis and performance optimization initiatives improving reliability and operational stability.
- Implemented hybrid connectivity architecture integrating on-prem infrastructure with Azure using secure VPN connectivity.

RightQuery Technologies Pvt Ltd

Jan 2008 - Mar 2016

Senior Software Developer

- Designed and developed enterprise web applications using C#, ASP.NET and SQL Server following layered architecture and separation of concerns.
- Built REST-based services and backend components supporting scalable enterprise business workflows.
- Migrated legacy VB6 applications to modern .NET architecture improving maintainability and performance.
- Optimized database performance and application scalability through schema design, indexing and query optimization.
- Mentored junior developers and contributed to architecture discussions and design decisions.

Nihal Software

Feb 2007 - Dec 2007

Software Developer

- Developed and maintained enterprise applications using .NET and SQL Server for business automation systems.
- Performed database upgrades and application modernization improving reliability and maintainability.
- Produced technical documentation supporting system maintenance and future enhancements.

Projects

- iCall Suite Platform — Enterprise Telephony Analytics Platform** *Solution Architect* Apr 2016 – Present
 - Defined the target-state architecture for a large-scale telephony analytics platform supporting enterprise customers across hybrid cloud environments.
 - Designed **API-first microservices architecture** using .NET Core services and event-driven messaging to decouple ingestion, analytics, and reporting workloads.
 - Architected hybrid deployment integrating **Azure services (App Services, AKS, SQL, Storage)** with on-prem VMware infrastructure using secure site-to-site connectivity.
 - Established **application NFRs** including high availability, horizontal scalability, and observability through centralized monitoring and logging.
 - Implemented **identity and authorization architecture** using ADFS and Entra ID enabling SSO and secure service-to-service communication.
 - Delivered containerized deployments and automated CI/CD pipelines enabling consistent platform releases and operational resilience.
- Voice Analytics AI Platform — Event-Driven Speech Intelligence System** *Solution Architect* May 2024 – Present
 - Architected a distributed AI analytics platform integrating speech transcription, NLP processing, and multilingual voice intelligence services.
 - Designed **event-driven microservices architecture** enabling scalable ingestion, processing, and analytics pipelines.
 - Defined **API-first integration patterns** ensuring interoperability across analytics services, data pipelines, and partner systems.
 - Implemented secure API exposure and routing using **Azure API Management** and global traffic routing.
 - Designed elastic compute scaling using **Azure VM Scale Sets** with cost-optimized Spot instances supporting dynamic workloads.
 - Established governance for data lineage, monitoring, and operational observability across analytics pipelines.
- InfraScope — Infrastructure Monitoring & Automation Platform** *Lead Solution Architect* Jan 2024 – Present
 - Designed a distributed monitoring and remote automation platform enabling real-time telemetry and management of hybrid infrastructure environments.
 - Architected client-agent communication using **WebSocket-based services** enabling secure command execution and telemetry ingestion.
 - Implemented identity governance using **Azure AD SSO and RBAC** enabling secure multi-tenant access management.
 - Built extensible platform modules for health monitoring, remote command execution, file management, and patch management.
 - Delivered a scalable architecture supporting centralized management and operational visibility across large enterprise environments.
- Analytics 365 — Microsoft Teams Analytics Platform** *Solution Architect* Aug 2018 – Mar 2021
 - Architected a Teams-integrated analytics platform delivering collaboration insights through cloud-native services.
 - Designed backend services using **ASP.NET Core APIs** integrated with **Power BI Embedded** and Azure SQL for analytics dashboards.
 - Implemented **OAuth2 / OIDC authentication** with Azure AD enabling secure multi-tenant identity integration.
 - Built event-driven reporting workflows using **Azure Functions and Event Grid**.
 - Successfully published the application to the Microsoft Teams Marketplace following Microsoft certification standards.
- Automated Trading Platform & Trade Confirmation System** *Senior Developer* Oct 2013 – Mar 2015
 - Developed a high-performance trading platform supporting low-latency transaction processing and reconciliation.
 - Implemented message-driven architecture for reliable trade confirmation and event-based processing workflows.
 - Built scalable backend services ensuring deterministic processing and audit traceability for financial transactions.

6. Microsoft Sentinel Enterprise SIEM Implementation

Security Architect

Dec 2024 – Jun 2025
- Architected centralized security monitoring platform using Microsoft Sentinel across multiple Azure subscriptions.
 - Implemented automated onboarding and standardized analytics rules using Infrastructure-as-Code.
 - Integrated identity telemetry and security logs across Azure workloads enabling unified detection and incident response.
 - Established operational playbooks and SOC workflows improving detection accuracy and incident response efficiency.

💡

Patents

- Artificial Intelligence Based Cervical Cancer Detection Device

Patent ID: 446410-001
- Designed an AI-enabled medical screening device that applies machine learning models to analyze cervical imaging data and detect early-stage abnormalities for faster and cost-effective diagnosis.
- AI Based Data Processing and Analysis Device

Patent ID: 425787-001
- Developed an AI-driven data processing system capable of real-time data analysis and intelligent decision support across distributed computing environments.
